

Building Capacities for an European-wide E-bus Deployment

Victor Battistino
Senior Manager – Sustainable Mobility Unit – Transport Malta

Project Summary:

“Transitioning from a region with public transportation based on diesel buses to a region with e-bus fleets requires ample expertise in different fields.”

E-BussED concentrates on the exchange of experience between partner regions at different stages of e-bus operation development, thereby serving regions struggling with this highly technical and fast developing field.

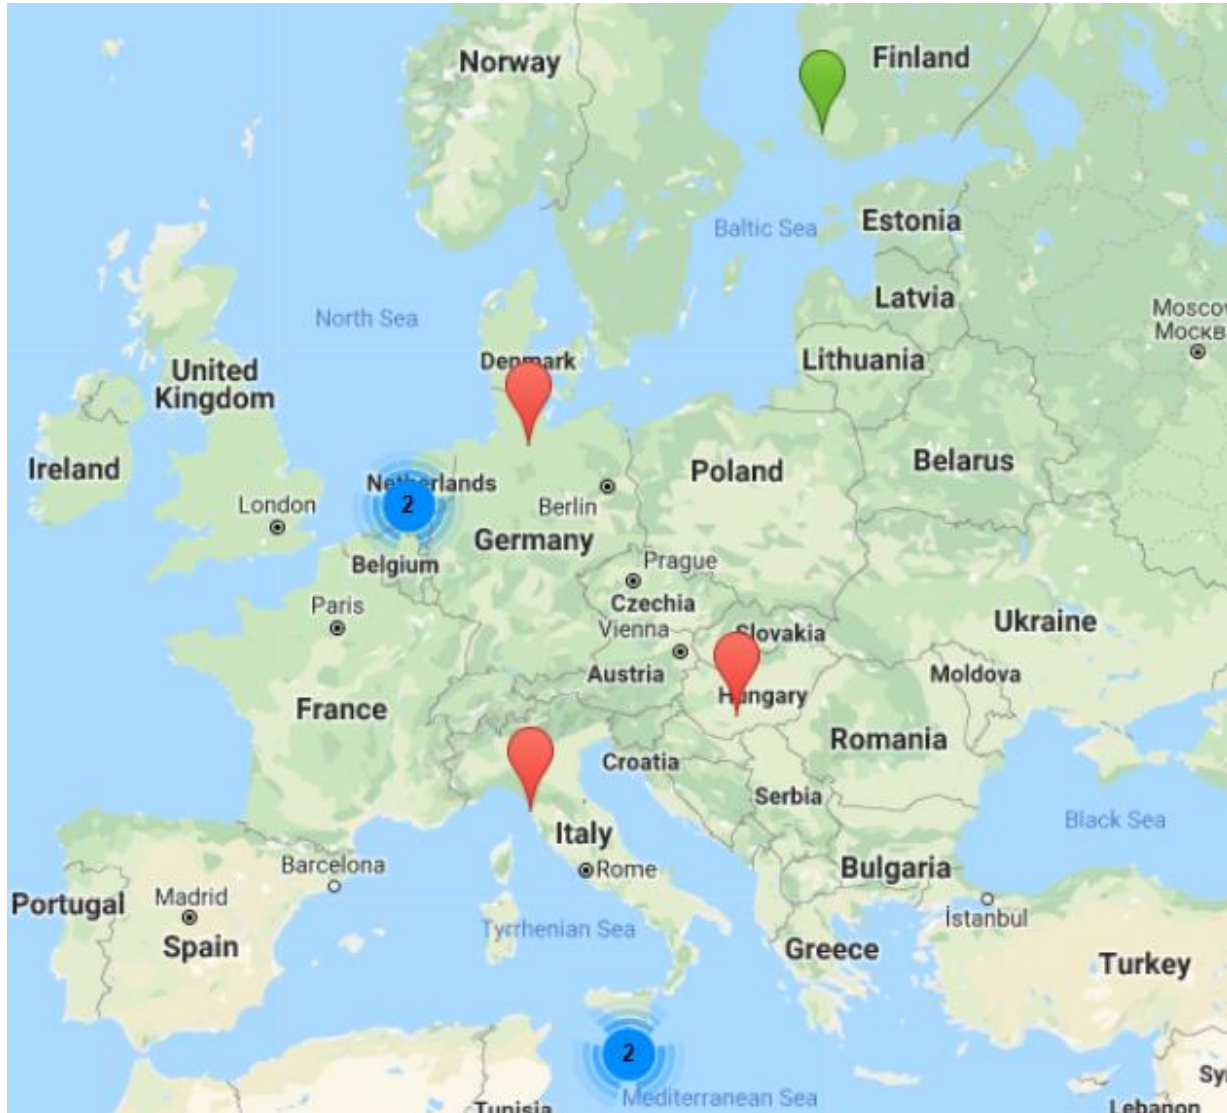

E-BussED project contributes to the Interreg Europe programme Specific objective 3.1 “Improving low carbon economy policies” by encouraging regions to develop and deliver better policies related to the deployment of e-buses.

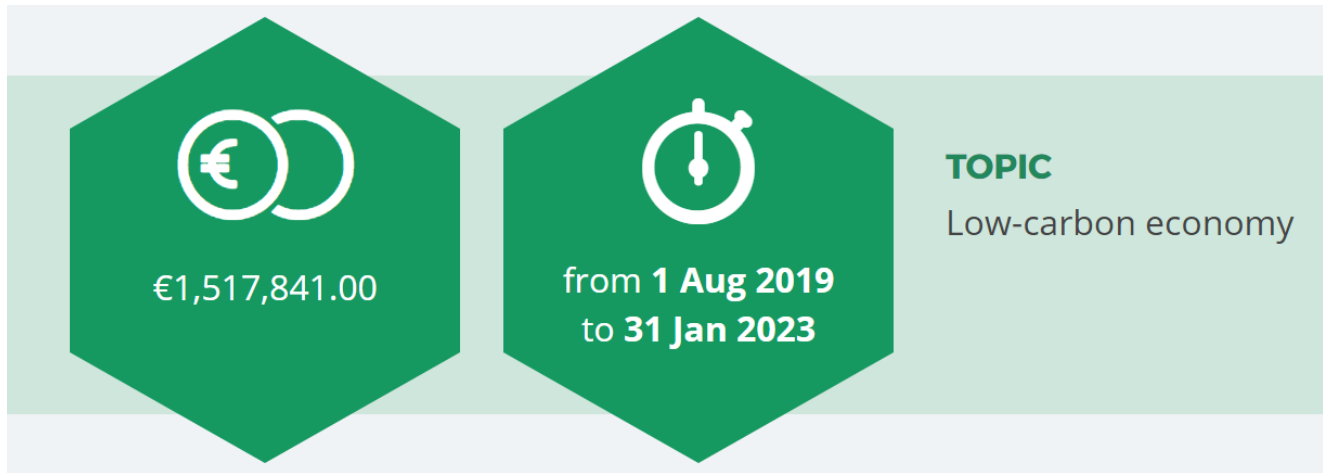

The project will deliver 6 regional action plans and produce 4 thematic best practice reports, a set of readiness level indicators and policy recommendations to be used in partner regions.

Transport Malta shall assist the
Ministry for Gozo in the
development of the necessary
indicators and other technical input
as requested by the project
consortium.

Project Partners

- LP Turku University of Applied Sciences, Finland
- PP2 Free and Hanseatic City of Hamburg, Germany
